EDUCATION

Arizona State University, Ira A. Fulton Schools of Engineering **Expected May 2028**

B.S. Computer Science and B.S. Mathematics; GPA: 3.90/4.00

- Dean's List every semester; New American University Scholar, Provost Distinction Award

EXPERIENCE

Software Developer, Data & Automation, Ira A. Fulton Schools of Engineering, ASU **Mar 2025 – Present**

- Replaced email-based purchase and reimbursement tracking for 73 EPICS teams with an Airtable pipeline that has processed 140+ requests, automatically routing each to the right faculty member, coordinator, or business office reviewer
- Built 2 public intake forms, 5 relational tables, and an 11-stage status workflow with live per-team budget rollups, giving 3 campus coordinators and the business office one source of truth
- Created the department's first project intake and tracking system (Microsoft Forms, SharePoint, Power Automate), now the standard path for every new project request

Undergraduate Research Assistant, Complex Adaptive Systems Initiative, ASU **May 2025 – Aug 2025**

- Contributed the literature review for a multimodal deep learning framework for lung cancer prognosis as the only undergraduate on a PhD and Master's team, informing a formal ASU–industry research proposal
- Automated a multi-hour monthly progress audit with Pandas and NumPy, generating visual reports for 3 research assistants
- Fine-tuned ResNet18 with FastAI for binary image classification experiments to assess research feasibility

PROJECTS

ConSnow – Consent-Native Ambient Social App

React Native, Expo, FastAPI, MongoDB

- Co-founded and shipped a passive social app to 15 TestFlight users across the US and India that shares everyday context with a user's 5–10 closest people, with no manual posting
- Built and deployed a FastAPI and MongoDB backend that classifies raw GPS data into Home, Work, Frequent, and Occasional places using Google Places geocoding
- Engineered a location accuracy pipeline with GPS drift filtering, stationary lock, and timezone-aware timestamps across iOS and Android builds

Ambi – Personal Browser Memory and Search **Source**

JavaScript, FastAPI, ChromaDB

- Built a Chrome extension and FastAPI backend that embeds browsing history into a local ChromaDB index of 10,000+ pages, letting users find past pages by meaning instead of exact keywords
- Ranked results by embedding similarity, recency, and time-on-page, discarding visits under 10 seconds to cut noise
- Kept all history on-device, excluding incognito pages and supporting full deletion of saved data

Focus Lock – Chrome Productivity Extension **Demo**

JavaScript, Python, Chrome MV3

- Built a Chrome MV3 extension I've used ~5 days a week since June 2026 that blocks distracting sites, survives browser restarts, and can't be ended early
- Integrated macOS Shortcuts so starting a lock also turns on Apple Focus across my devices

AWARDS & ACTIVITIES

- **1st Place Overall ($2,500), ASU Hacks for Humanity 2026:** Crash Test Buddy, an AI toy safety rating concept. Co-developed the concept, built the demo video and parts of the site, and delivered the pitch
- **1st Place, ASU Principled Innovation Academy:** Ember, a grief-companion app. Led problem framing and product direction & demo build
- **Activities:** SODA, DevLabs, Claude Builder's Club; hackathons include HackAZona and ASA DataFest (solo); tutored 20+ students in mathematics, Volunteered for 40+ hours at Lost Our Home Pet Rescue

SKILLS

Languages: Python, JavaScript, TypeScript, C++, Java, SQL
Technologies: FastAPI, React, React Native, PostgreSQL, MongoDB, ChromaDB, Docker, Git, GitHub Actions (CI/CD), Pytest
AI Development Tools: Claude Code (agentic workflows, MCP)
Concepts: Data Structures & Algorithms, Object-Oriented Design, REST APIs, SQL & NoSQL, RAG, Machine Learning
